

# HIGH-ENERGY JET INTERACTION MONTE CARLO FOR THE FUTURE GENERATIONS: HIJING++

WIGNER GPU DAY 2018

---

Gábor Bíró

20-21. June 2018.

# COLLABORATORS

Gergely Gábor Barnaföldi

Gábor Papp

Péter Lévai

Miklós Gyulassy

Szilveszter Harangozó

Xinnian Wang

Benwei Zhang

Guoyang Ma

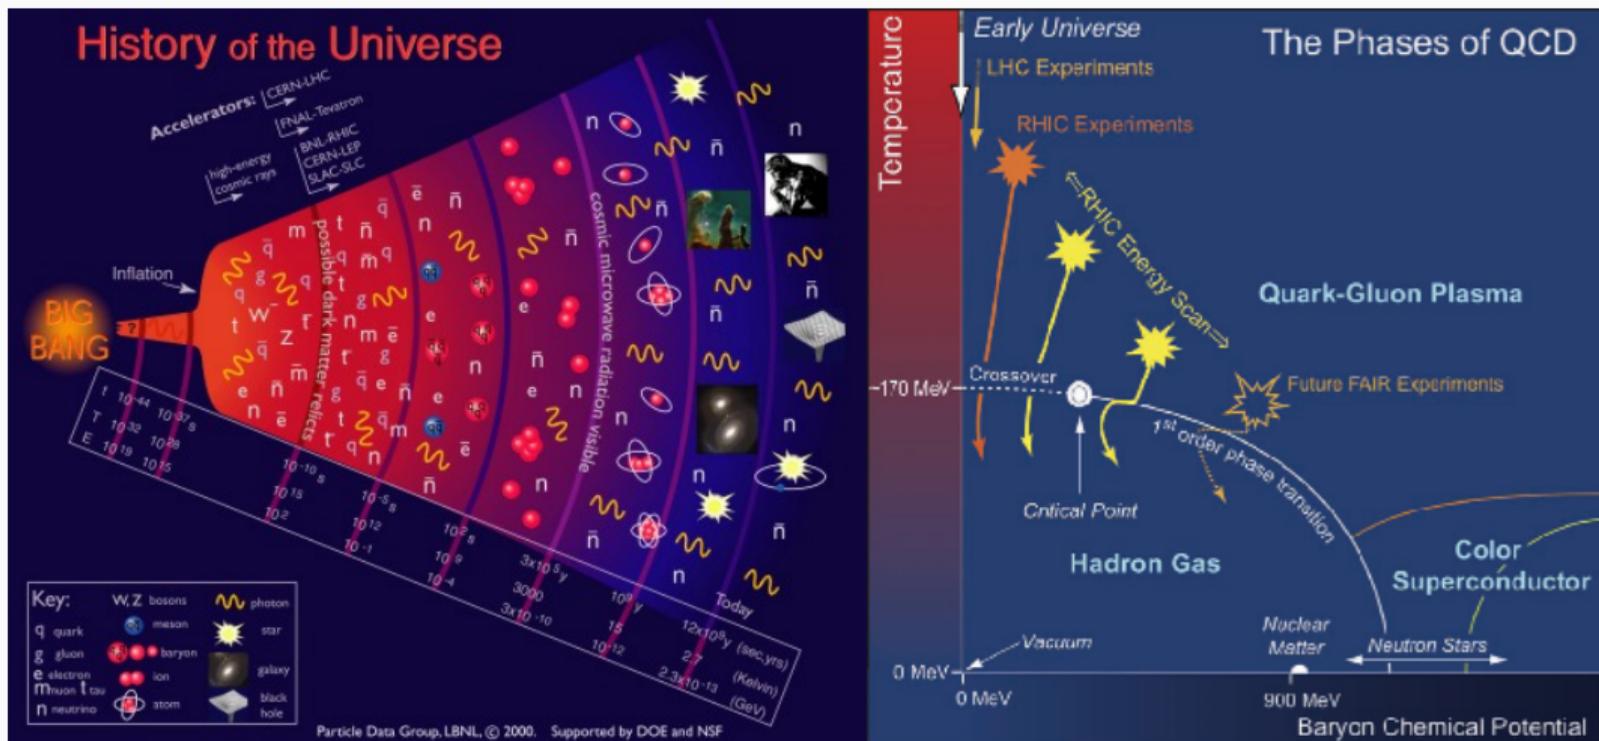

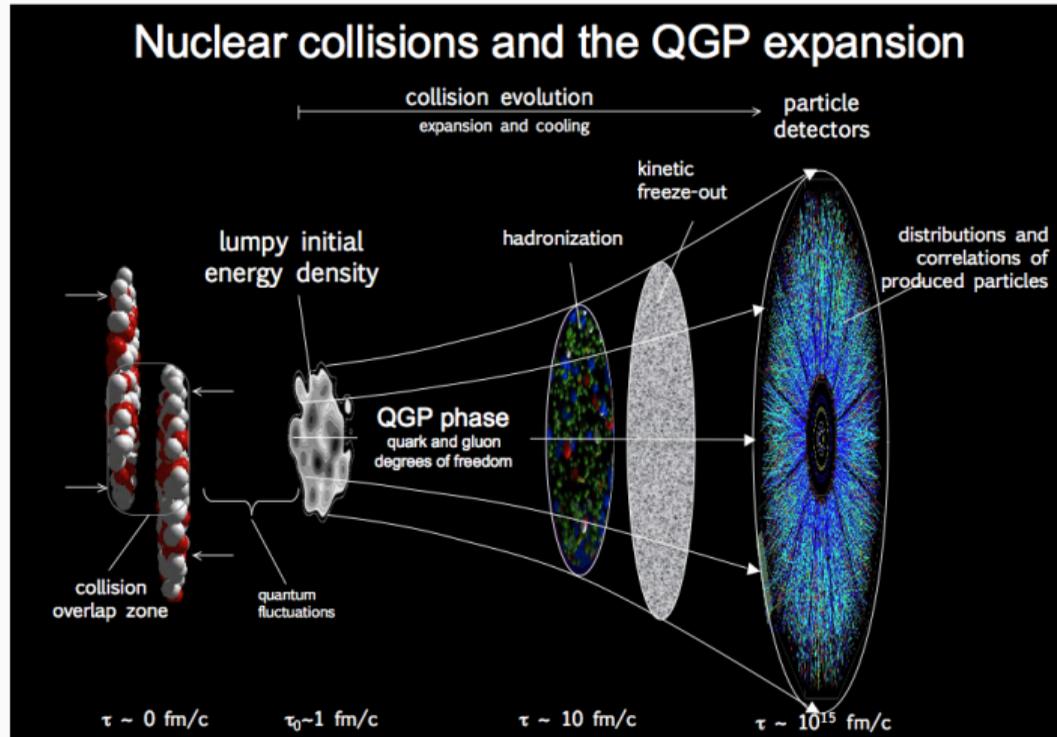

The research is supported by the

- Hungarian-Chinese cooperation grant No TÉT 12 CN-1-2012-0016, No. MOST 2014DFG02050 and Wigner HAS-OBOR-CCNU grant
- OTKA grants K120660, K123815, THOR COST action CA15213
- Wigner Data Center, Wigner GPU Laboratory
- ÚNKP-17-3 New National Excellence Program of the Ministry of Human Capacities

# 核 易 经

Hé - yì - jīng

"Nuclear change theory"; Book of Changes, "Originally a divination manual in the Western Zhou period (1000-750 BC)"

First, FORTRAN version: 1991, Miklós Gyulassy, Xin-Nian Wang

X.N. Wang, M. Gyulassy, *Phys. Rev. D* **44**, 3501 (1991).

- Pairwise nucleon interactions ((in)elastic scattering (Pythia), diffraction, gluon radiation, Lund fragmentation...)
- Key importance for detector design and validation, testing new physics
- Up to date, the community still uses the (more-or-less) original FORTRAN code
- Challenge: software simulation of 600 million real collision in each **second** (HiLumiLHC: multiple of this)
- Target audience: the whole heavy ion community (large collaborations and BSc students as well)
- Gergely Gábor Barnaföldi, Gábor Papp, Péter Lévai, Szilveszter Harangozó, Miklós Gyulassy, Xin-Nian Wang, Ben-Wei Zhang, Guoyang Ma

## Solid C++ foundations

- User friendly usage (C++14 compiler, cmake, LHAPDF6, Pythia8)
- Many optional extension (ROOT, FastJet, Rivet)
- Easily parallelizable

main.cc:

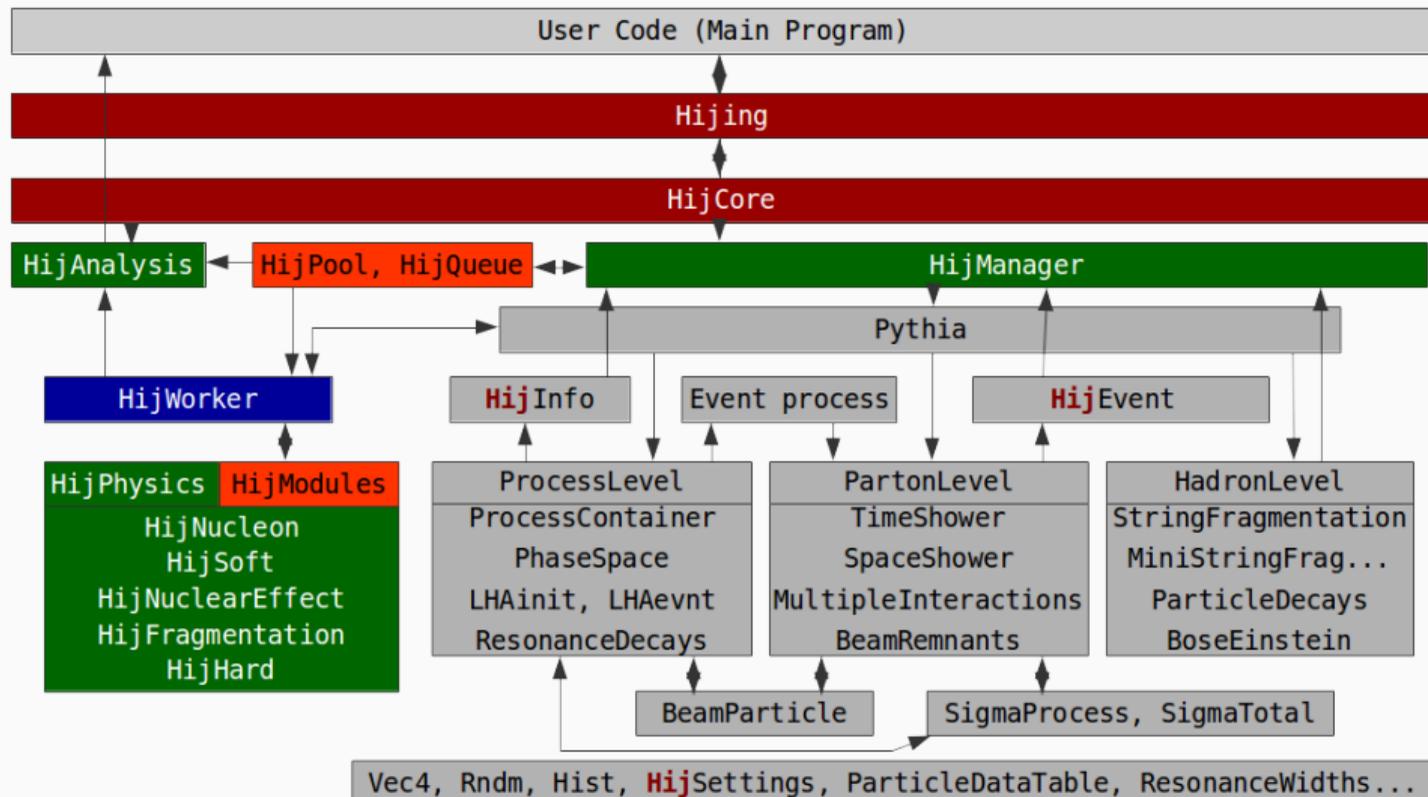

```
1 #include "Hijing.hpp"
2
3 using namespace Hijing3;
4
5 int main(int argc, char* argv[])
6 {
7     Hijing hijing;
8     if(argc==1)
9         hijing.readFile("testSettings.cmd");
10    else
11        hijing.readFile(argv[1]);
12
13    hijing.init();
14    hijing.start();
15 }
```

testSettings.cmd:

```
1 PDF:pSet = GRV98lo
2 ! PDF:pSet = nCTEQ15
3
4 Hijing:threads = 3
5 Beams:eCM = 8160
6 Hijing:NuclearEffects = on
7
8 Main:numberOfEvents = 50000
9 Hijing:idA = P
10 Hijing:aproj = 1
11 Hijing:zproj = 1
12 Hijing:idB = A
13 Hijing:atarg = 208
14 Hijing:ztarg = 82
15 (...)
```

Highly customizable through run parameters stored in `xml` files

# HIJING++ OUTLINE

## In the `xml`:

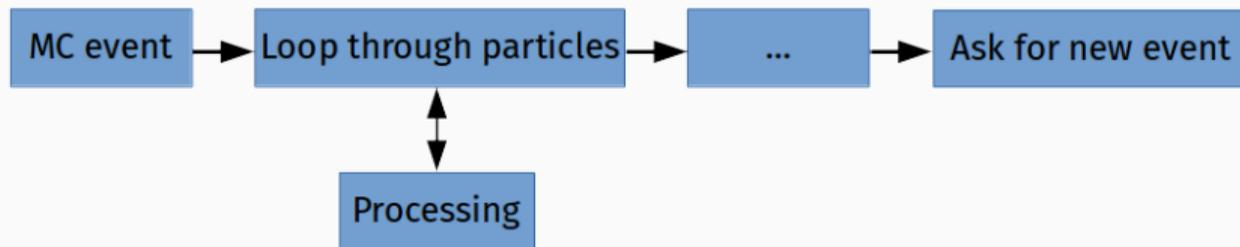

```
1 <word name="Hijing:Quenching" default="HijQuenching_GLV0">  
2 Select the jet quenching definition: GLV model version 0.  
3 </word>
```

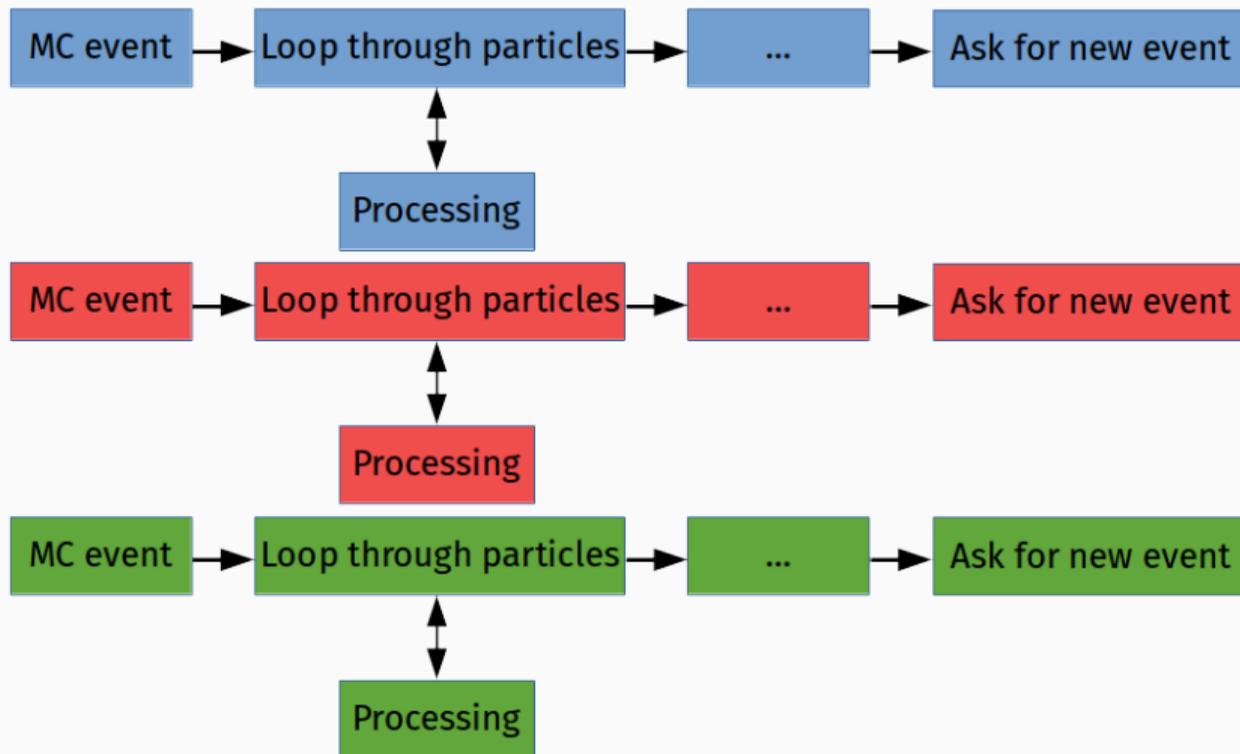

## Building the HijModules:

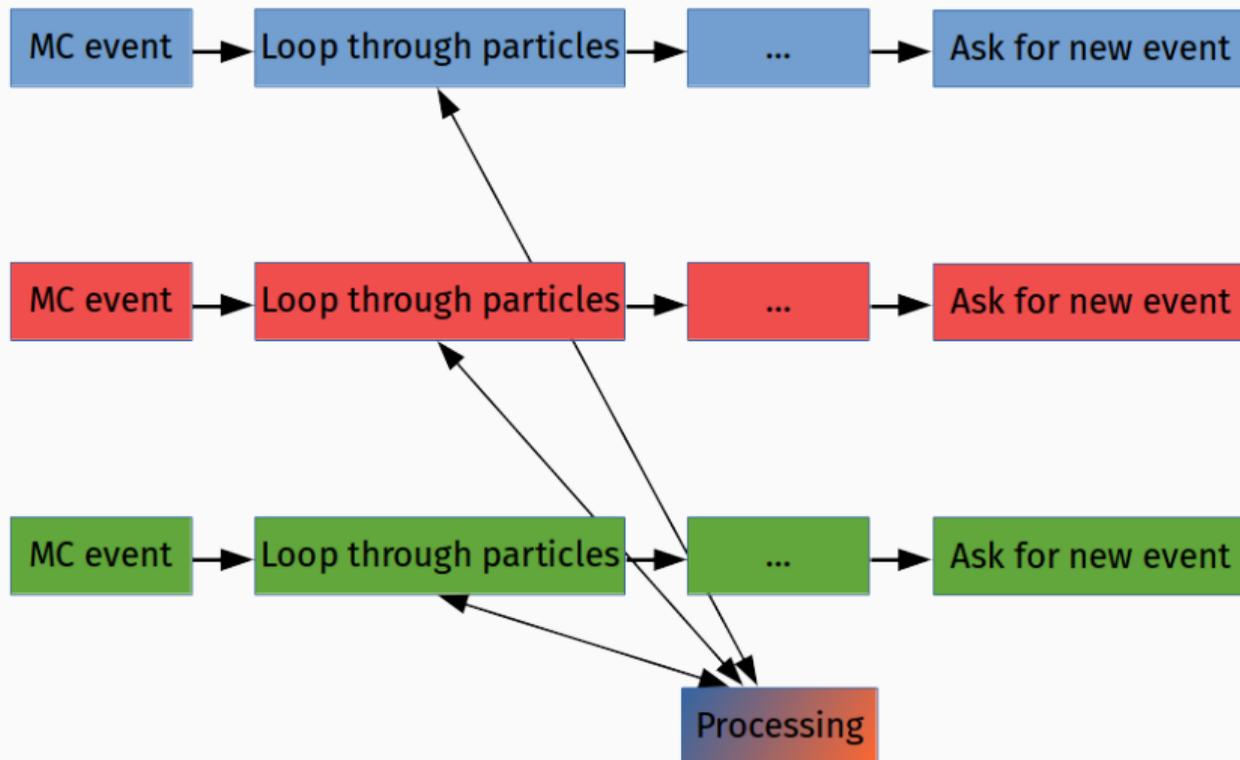

```
1 unique_ptr<IHijQuenching> ModuleFactory::makeQuenching(const string &name) {  
2     if (name == "HijQuenching_GLV0")  
3         return move(make_unique<HijQuenching_GLV0>());  
4     if (name == "HijQuenching_GLV1")  
5         return move(make_unique<HijQuenching_GLV1>());  
6 }
```

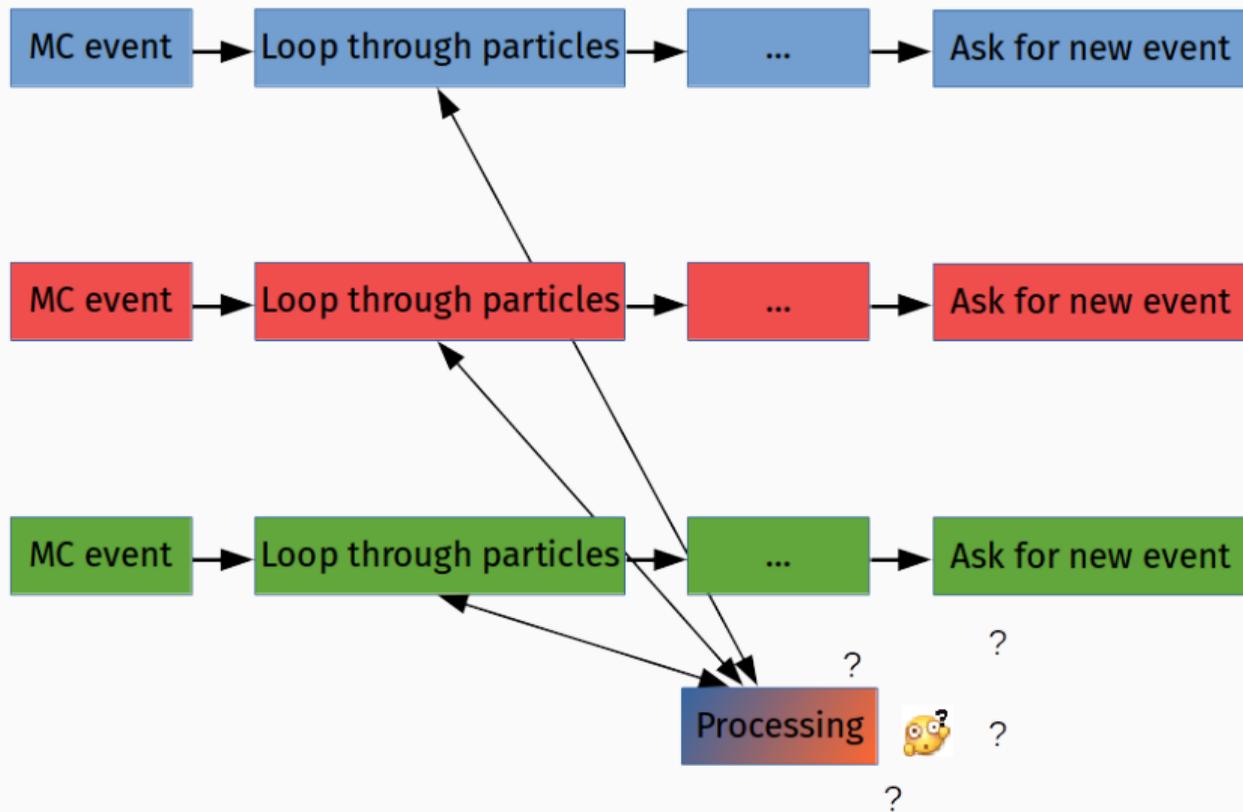

## At user level, in `testSettings.cmd`:

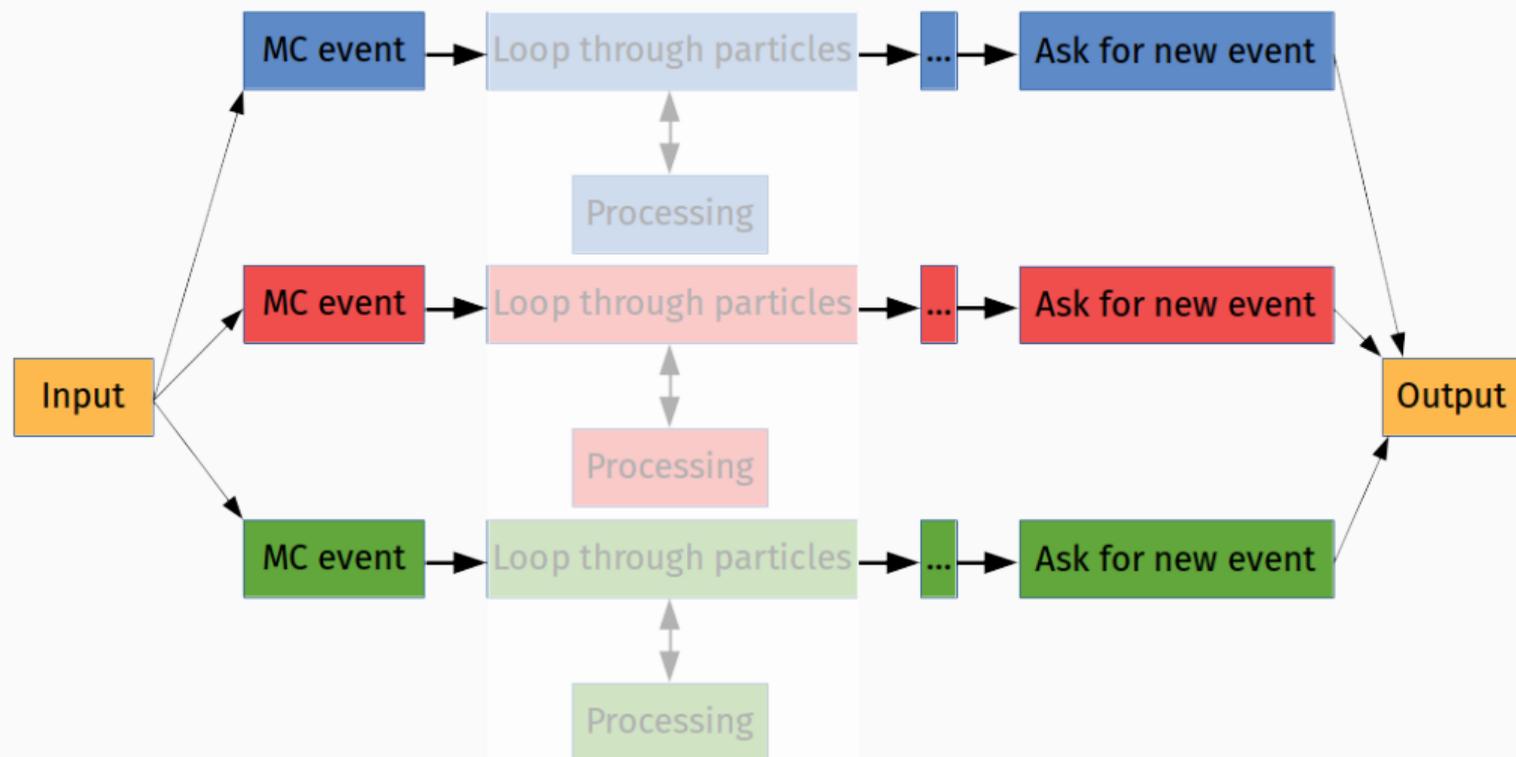

```
1 Hijing:Quenching = HijQuenching_GLV0
```

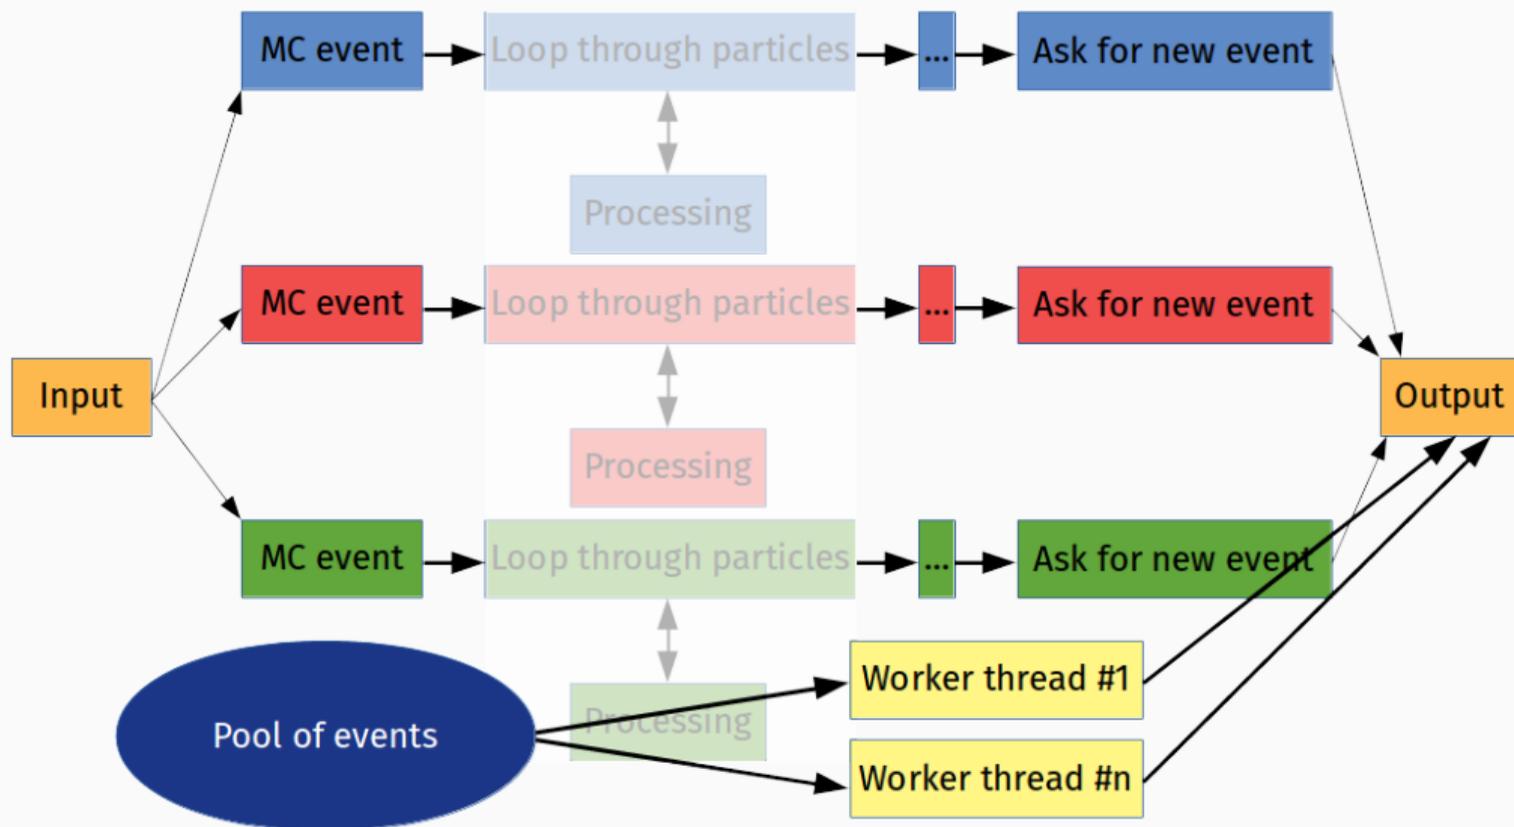

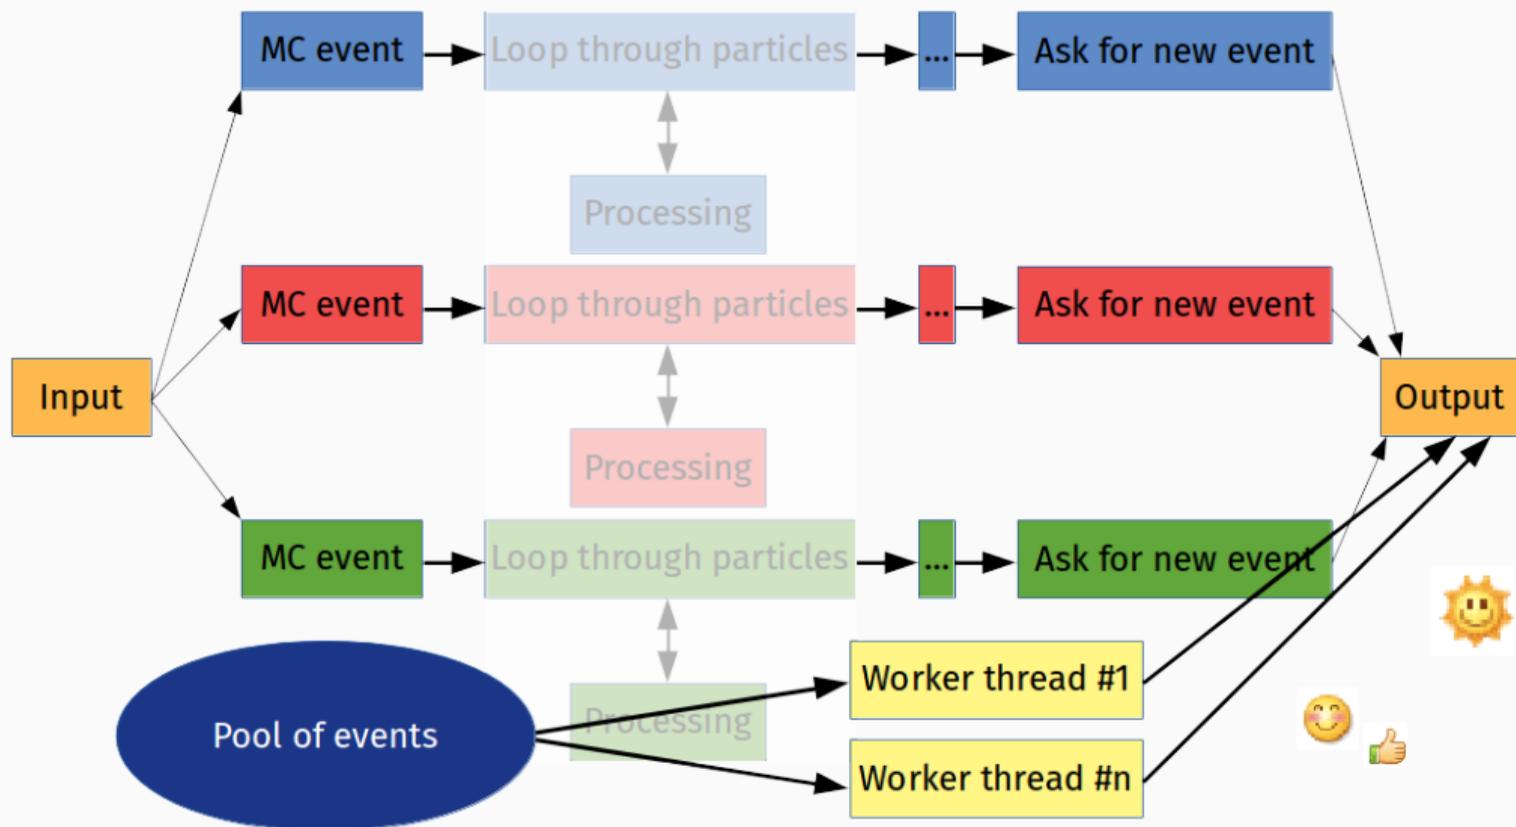

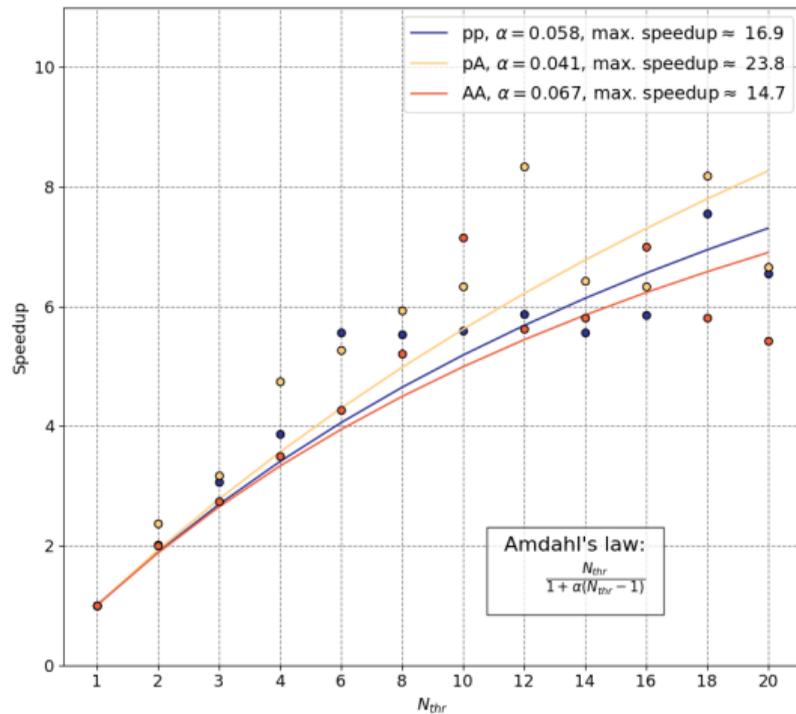

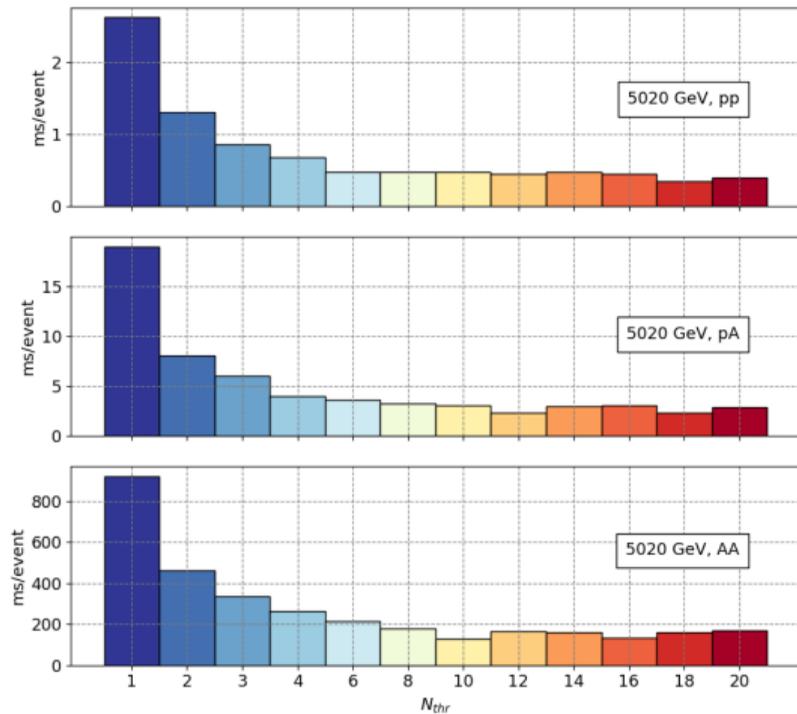

## Analysis interface

```
1 hijing.newAnalysis("root", "HardCollision", "pTdata_hard", 50, 0.0001, 20.0);
2
3 hijing.newAnalysis("root", "SoftProcess", "proj_pxy", 100, -15.0, 15.0, 100, -15.0, 15.0, "p_{x,Proj}", "p_{y,Proj}");
4
5 hijing.newAnalysis("ascii", "SoftProcess", "proj_pz_ascii", 100, -5000.0, 15000.0);
6
7 hijing.newAnalysis("root", "raw", "EventEnd", "raw data");
8
9 auto myEventFilter = [&](const Event &event) {
10     return true;
11 };
12
13 auto myHadronFilter = [&](const Particle &particle, const Event &event) {
14     return particle.isFinal() && abs(particle.id()) == 211;
15 };
16
17 hijing.analysisBranches("raw data", "n", "b", "pT");
18
19 hijing.analysisFilter("raw data", myEventFilter, myParticleAccept);
20
21 hijing.analysisProperties("pTdata_hard", "final", "pT", "ID1", "ID2");
22
23 hijing.analysisProperties("proj_pz_ascii", "final", "pz");
```

## Welcome to HijWiki!

For install, visit the [install instructions](#).

For the tunable parameters, go to the [index page](#).

Example mains:

- [main01](#): short description
- [main02](#): short description
- [main03](#): short description
- [main04](#): short description
- [main05](#): short description

## About

### UpdateHistory

### Bibliography

Version 3.1.1 last updated on 2018.03.12.

## Hijing++ v3.1.X

The following environment variables need to be set:

```
export PYTHIA8="/path/to/Pythia8"  
export PYTHIA8DATA="/path/to/Pythia8/share/Pythia8/xmldoc"  
export LHAPDF6="/path/to/LHAPDF6"
```

Clone the project from master branch:

```
git clone ssh://git@gitlab.kfk1.hu:2222/biro.gabor/Hijing3.git  
cd Hijing3 && mkdir build && cd build  
cmake ../  
make -jN
```

If cmake didn't find something, add the path in flag, e.g.

```
-DLHAPDF6=/path/to/lhapdf6  
-DPYTHIA8=/path/to/pythia8
```

Further optional flags:

```
-DWITH_ROOT=[ON|OFF] (default: ON)  
-DWITH_FASTJET=[ON|OFF] (default: OFF)  
-DBUILD_EXAMPLES=[ON|OFF] (default: ON)  
-DMULTITHREAD=[ON|OFF] (default: ON)
```

[BeamRemnants](#)

[Glossary](#)

## Parameters

**parm Hijing:MinInvMassExStr (Default: 1.5, Min: 0.0, Max: 1000000.0)**

Minimum value for the invariant mass of the excited string system in a hadron-hadron inte

**parm Hijing:InvMassCut (Default: 3.0, Min: 0.0, Max: 1000000.0)**

Invariant mass cut-off for the dipole radiation of a string system below which soft gluon ra

**parm Hijing:HardCut (Default: 0.0, Min: 0.0, Max: 1000000.0)**

Minimum pt transfer of hard or semihard scatterings, was HIPR1(8) before.

**parm Hijing:TriggerPT (Default: -2.25, Min: -10000.0, Max: 100000.0)**

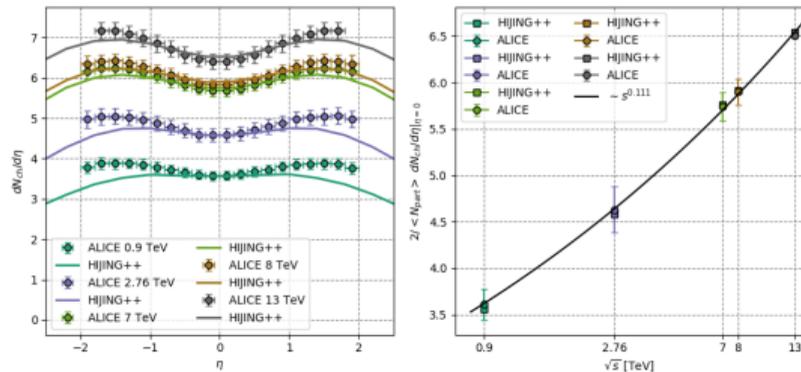

Specifies the value of pT for each triggered hard scattering generated per event. If HIPR1(

**parm Hijing:MinJetPT (Default: 2.0, Min: 0.0, Max: 10000.0)**

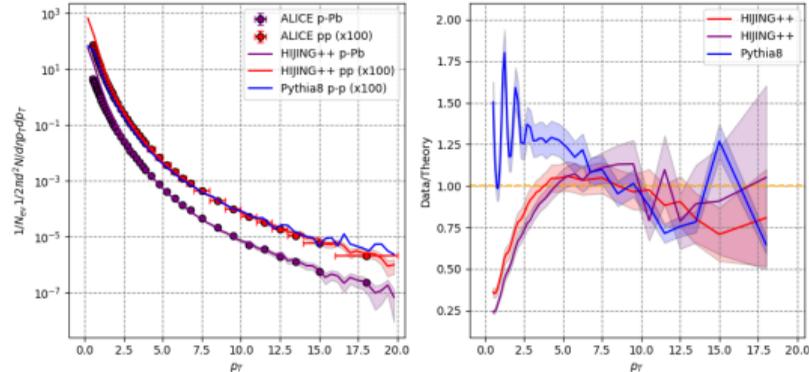

minimum p<sub>T</sub> of a jet which will interact with excited nuclear matter. When the p<sub>T</sub> of a jet

# HIJING++ PHYSICS BENCHMARKS

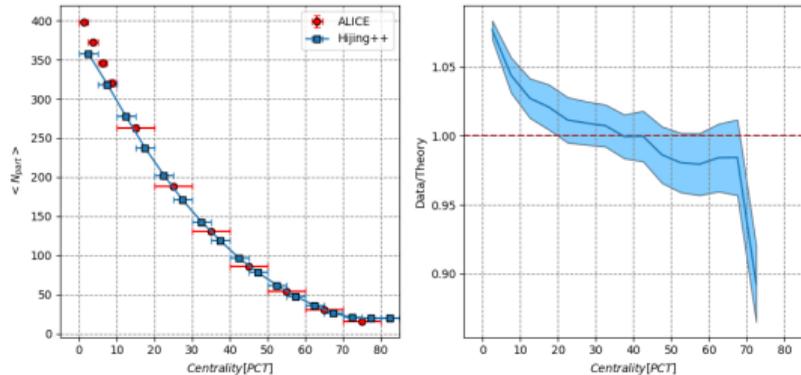

Charged particle pseudorapidity in pp collisions at  $|\eta| < 0.5$

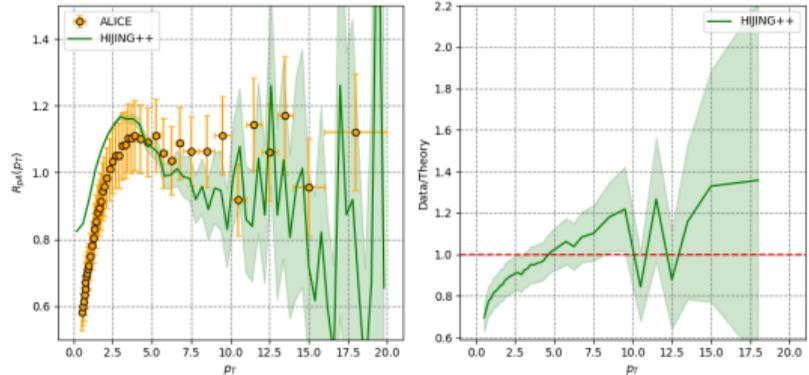

All charged hadron spectra in pseudorapidity region  $|\eta| < 0.3$  at  $\sqrt{s_{NN}} = 5020$  GeV

$N_{part}$  in PbPb collisions for different centralities in  $|\eta| < 0.5$  at  $\sqrt{s_{NN}} = 5020$  GeV

All charged nuclear modification factor  $R_{pPb}(p_T)$  in pseudorapidity region  $|\eta| < 0.3$  at  $\sqrt{s_{NN}} = 5020$  GeV
